

EV CHARGING INFRASTRUCTURE

CHARGING THAT'S READY TO WORK

Residential • Commercial • Workplace • Fleet • Multifamily

EV charging
ON CALL 24/7

Electric vehicles are a growing reality for homeowners, businesses, workplaces, and fleets. DSI Commercial Electric installs and supports EV charging infrastructure with safe, practical electrical work designed for long-term use.

Backed by DSI

EV charger installation requires more than placing a station on a wall. The electrical system must be evaluated for capacity, load, and safe connections. DSI Commercial Electric is backed by Design Solutions & Integration, so every installation is done right and followed through.

A Practical Installation Process

We start by understanding your charging need, review electrical capacity and location requirements, then complete the installation with a focus on safety, reliability, and clear communication from start to finish.

EV Charging Capabilities

- Residential EV charger installation and wiring
- Commercial EV charging station installation
- Electrical panel and capacity upgrades for EV loads
- Workplace and employee charging solutions
- Fleet charging electrical infrastructure support
- Multifamily and managed property charging support

An Ownership Culture

DSI is an ESOP company, so the people doing the work are invested in its outcome. That means honest load assessments, installations done right the first time, and follow-through once the system is live.
